Human's Plexus Systems and "Nikola Tesla's 369 Theory" for Forming Universe and God

M. M. Shrestha

ABSTRACT

All activities which are taking place in the Cosmos also exist in a human body in subtle micro-scale. Plexuses centers in a human body are the most mysterious kinds of energies. The six-center plexus system is the path of the Kundalini shakti, the primordial cosmic energy of a person. Each plexus has its own propensities (vibrating words/dimensions/vritti) and an acoustic root. These plexuses control some cluster of words of sounds and corresponding physical organs in human body. The 50 main propensities of the human's unit mind are expressed through the vibration-expression of these plexuses. These vibrations cause hormones to secrete from the corresponding glands of the human's body. These plexuses can play very important roles in curing the diseases. According to the Theory of Nikola Tesla's 369, there are all together 1 to 9 digital root numbers exist. All other higher or lower numbers are the combination of those digital root numbers. This statement seems quite true when we compare it with Theory of Absolutivity. If 3, 6, 9 numbers are arranged together it makes a letter Ohm (AUM) which represents actually a Sagun Bramh/Nikola Tesla's 369 triangle which is a part of NirgunBramh having higher dimensions. Number zero is the NirgunBramh (having all the qualities but in dormant form) which does not possess any quality in action. Number 3, 6, 9 forming as an equilateral triangle of static, mutative and sentient forces representing the Black-hole which is a part of Sagun Bramh projecting Himself as a Visible World through Big-bang along with forming five basic elements such as Ethereal, Areal, Fire, Liquid and Solid. According to the biological science, life emerged in this planet from matter about four billion years ago in the form of DNA that carried the software for the development of billion of species on the way to its final destination in humans. These facts also fully support the above hypothesis of universe formations.

I. INTRODUCTION

Vibration of sentient, mutative and static forces produces sound and corresponding words that generate different physical matters and activities. For any form of existence, may be a matter, motion or any activities, there must a corresponding sound or bits going on.

In Bible, John 1 proclaimed, "In the beginning was the Word, and the Word was with God, and the Word was God. He was with God in the beginning. Through Him all things were made; without Him nothing was made that has been made". Therefore, the concept of communication is core to the very nature of God, and living things are only a reflection of their reality (Taneja, 2009; Craig, 1999).

All functions which are taking place in Cosmos exist also in micro scale in human body (Taneja, 2009). Cosmic mind can act in all direction at a time whereas human's unit mind as its inbuilt limitation can work only at one direction at a time. Normally, human unit mind emits "beta waves" in irregular and very fluctuating manner that produce restless thinking in human's mind. But a repeated chanting of the guru offered mantra in course of meditation results in an aspirant's restless unit mind calm in vibration, and, thus, the brain emitting "alpha wave" effects into a deep and serene concentration. And its continuation helps slow down the effect to "theta wave" thus generating a flow of tremendous psychic energy inside the unit mind. "Theta wave" is the wave of Prakriti and NirgunBramh (Purush) which has a wave length of infinity in nature. Thus by virtue of meditation human can improve his unit mind's wave length to infinity paralleling with "theta wave", that rises human's unit mind to a higher plane fetching

magical powers. In the Cosmos, each and every matter irrespective of size possesses positive and negative factors in balanced state (Shrestha, 2021).

The plexuses (chakras) have been described by all spiritual paths and culture like Buddhists, ancient Chinese, Hindus, Tantric, Christian and Jewish mystics, Sufis and Native American Indians. During The Great War of Mahabharata, Lord Krishna persuaded and encouraged the great warrior Arjun towards the Great Holy War by showing his “Birat-Roop” (Universal Form: Universe in His body), and further explained him that he (Lord Krishna) is all in all and everything is part of his body. He is God and all energy, matter and entities in Cosmos reside in Him. All the living and non-living entities come out from Him and merge again into Him. That is why during meditation one usually chants the mantra “AhamBramhasmi” means “I am the Bramh”. These are explained in the Srimad Bhagavad Geeta, a holy book (Shrestha, 2018). This fact has been also supported scientifically while studying the equation of General Relativity by Stephen Hawking and his three British astrophysicists in 1970 which states, “If the universe is governed by the equations of General Relativity, not only is we faced with an ultimate origin, but we are also all of the matter in the universe, and all of the energy in the universe” (Hawking, 2007). Therefore, we need not to be surprised while getting such a result of the Space-Time Theorem of General Relativity.

There are 6 plexuses in the Kundalini Chakra (Fig. 1) in a person. Each plexus has its own propensities/vibrating words and an acoustic root. Muladhar Chakra has 4 propensities and an acoustic root. Swadhisthan, Manipur, Anahat, Visuddha, and Anjna Chakras have 6, 10, 12, 16 and 2 propensities, respectively and an acoustic root in each. Sahasrar Chakra is the combination of all above chakras and has all together 1000 propensities. Pineal gland of a person works with 50 propensities with 5 internal and 5 external making together 10 and the Pituitary gland controls other two glands (Sarkar, 1991; Shrestha, 2009).

Plexus system works both at micro and macro levels. At micro level, it controls and regulates the corresponding human physical organs, which can cure the diseases of related organs with the flow of oxygen along with melatonin from the brain and pituitary glands during meditation. Plexus system also works at macro level through Ajna Chakra or Nikola’s Tesla’s theory of 369 triangles. Its scope and area can be beyond one’s imagination. However, the higher level of meditation with the theta waves of Sagun Bramh or Purush can achieve it purposefully (Fig.2). Therefore, Nikola Tesla is alleged to have stated, “If you only knew the magnificence of the 3, 6, and 9, then you would have a key to the universe”. It is believed that 3, 6, 9 then, represents a “flux field” or a vector from the four physical to the higher dimensions that make every wish of a person to be manifested.

II. PLEXUS SYSTEM IN HUMAN BODY

Fig. 1. Plexus system in human body.

Plexus system control physical and mental attitudes in a human body. Each plexus has its own word or sound known as acoustic root, which controls corresponding physical organ (Fig. 1). The spiritual practice is the purification and control of these Plexuses (Chakras). It is really surprising to mention here that our alphabets are not the product of any artists or letters invented by chance. These are the collections of alphabets symbolizing internal sounds which we get from our bodies. Our ancient yogis who directed their inner ears towards these energy centers were able to hear the subtle vibrations emanating from each; collectively of them 50 different vibrations in all. Then they (rishis) uttered them aloud, and each of these subtle inner sounds became one letter of the Sanskrit alphabets. Thus the Sanskrit language was developed from the externalized sounds of our subtle internal energies. It is the human body’s eternal song (Anandamitra, 2000). These vibrations cause hormones to be secreted from the corresponding glands. The human mind is alive as long as the propensities are there. These kinds of energies of plexuses

can play very important roles in curing diseases. Only, we must be able to identify and energize the related plexus by meditating and concentrating in the located place for curing any kind of diseases. Chakras are the centers of many mysterious kinds of energies in our body (Sarkar, 1991; Shrestha, 2009). Meditating and concentrating on the plexus it can root out diseases completely without any negative effect.

We can control these plexuses through meditation, and in as a result, human mind can raise to very higher level beyond physical world. Humans' unit minds are so subtler that they can move many times faster than speed of light. The meditation process is like a string theory in which unit mind of a person enters through tiny strings and reaches near to desired places within no time.

Normally the human brain emanates irregular rhythms called "beta waves" which represents restless thinking of mind. It has been tried and tested for thousands of years by our sages as the most efficient and practical process to pierce through the disturbances of the subconscious mind and enter the blissful, super conscious state. Repeating a special sound (mantra) during meditation it creates a calm vibration that stills the restless human mind. Gradually, the brain waves slow down to calm rhythmic "alpha waves" and the meditator enters a state of deep and serene concentration. With the continued concentration on the brain waves slow down still further to "theta waves" and tremendous psychic energy builds up inside the mind (Fig. 2). Thus, an inspired meditator can improve his mental thinking to theta wave. Theta wave has a length of infinity, which is the wave of invisible Prakriti and Purush entity, spiritual in nature (Shrestha, 2009).

Fig. 2. Alpha, Beta, Theta and Delta waves.

A. Muladhar Chakra/Terrainian plexus

Fig. 3. Muladharchakra or teranian plexus or pelvic plexus or Booma mandal.

Muladhar Chakra/Terrainian plexus has four propensities/dimensions and an acoustic root (Fig. 3). The main source of energy in human body is Muladhar Chakra. It is golden yellow color in nature. This chakra situated between sex organ and anus (rectum) about one inch inside (or two fingers above the anus or rectum and two fingers below the generative organ). As the Muladhar Chakra gets energized all eternal power starts moving upward and charges all other plexuses automatically. In Muladhar Chakra the Ida comes from left as a sentient force, Pingla as a static force from right and Sushumna a mutative force from middle flows. That is why this plexus is called the mother of all the three forces sentient, mutative and static energies. If we could energize this chakra we will be freed from diseases and remain with bright and cheerful face. This plexus controls upper portion of Sushumna, lower portion of stomach, small

intestine, big intestine, anus, coccyx, lower gate of Sushumna, main tantu of sushumna and whole muladhar chakra. Concentration of mind in this chakra imparts qualities of good health, efficiency in works; proficiency in capability development in a person. Energizing this chakra one will be freed from diseases and remain with bright and cheerful face.

Acoustic root	Propensities
Va	Psycho-spiritual longing
Sha	Psychic-longing
S'a	Physical-longing
Sa	Spiritual salvation

B. Swadhisthan Chakra/Fluid plexus

Swadhisthan Chakra/Fluid plexus has 6 propensities to control the organs (Fig 4). It represents the liquid or water, and it has a moon like color. This chakra is situated about 1 inch to 1.5 inch above the Muladhar Chakra (two fingers above Muladhar Chakra near the lower part of the abdomen at the front of the pelvis). Concentration on this chakra imparts a person the capability of creation, nourishment and destruction. Saraswati (goddess of knowledge) always remains in his/her tongue. This controls the organs such as kidney, urinary gland, back side of penis, bladder, seminal vesicle, testicles, prostate glands and penis.

Fig. 4. Swadhisthanchakra or fluid plexus or hypogastric plexus or Taralamandal.

Acoustic root	Propensities
Ba	Indifference
Bha	Psychic Stupor, lack of common sense
Ma	Fear of Annihilation
Ya	Lack of Confidence
Ra	Helplessness
La	Crude manners

C. Manipur Chakra/Igneous plexus

Fig. 5.0 Manipur chakra or igneous plexus or epigastric plexus or Agni mandal

Manipur Chakra/Igneous plexus has 10 propensities (Fig. 5). It represents a fire in color. This Chakra is situated near the back of navel. It has lot of accumulation of heat. This is closely related to the Adrenal gland. If the gland secretes more Adrenaline hormone than required, the person will be always in tension and may create high blood pressure, heart disease, ulcer, cancer etc. Pancreas, intestine, all digestive organs and stomach get energy from this plexus. Concentration in this chakra helps a person to be free from fear, diseases, indigestion problems, diabetes, constipations etc. This chakra controls the organs like stomach, liver, pancreas, intestines etc. This plexus is static in nature.

D. Anahat Chakra/Solar plexus

Anahat Chakra/Solar plexus has 12 propensities and is the cause of Omkara (Fig. 6). This is situated near the heart between two nipples and a bit above the Igneous Plexus. Concentrating on this chakra imparts eternal love, kindness, service and sympathy qualities and one can get rid of the heart diseases. This is related to a person's heart. It is whitish in color representing the air. This plexus is sentient in nature.

Fig. 6.0 Anahatchakra or solar plexus or cardiac plexus or Saoramandal.

Acoustic root	Propensities
Ka	Hope
Kha	Anxiety
Ga	Effort to arouse one's domant potentiality
Gha	Love and attachment
Una	Arrogance, vanity
Ca	Discrimination, conscience
Cha	Psychic depression
Ja	Conceit, egoism
Jha	Avarice, voracity
Ina	Hypocrisy, deception
Ta	Argumentativeness
Tha	Repentance

E. Visuddha Chakras/Sidereat plexus

Fig. 7. Visudhachakra or sideral plexus or carotid plexus or Nakchatramandal.

Visuddha Chakras/Sidereal plexus has 16 propensities and it secretes thyroxin hormone, which balances physical and mental health of a person (Fig. 7). It is situated at the throat. Concentration on this chakra gives the quality of poet, great knowledge, peace, healthy life, free from sorrow and long life. It represents the sky which is a combination of all seven colors. Those who concentrate on this plexus will be freed from thyroid diseases. Thyroxin hormone secreted over here balances physical and mental health of a person. If this para-thyroid organ produces more thyroxin, a person may get a hyper thyroids disease

which causes weight losses, fairness, nervousness, quarreling nature, sleepless characteristics. On the contrary, if it produces less thyroxin, a person may get fatty body, mental weaknesses, and drowsiness. Concentration on this chakra gives the quality of a poet, great knowledge, peace, healthy life, free from sorrow and long life. This is related with lungs, internal portion of the lungs and throat track.

<i>Acoustic root</i>	<i>Propensities</i>
A	Peacock
A	Bull
I	Goat
Ii	Horse
U	Cuckoo
U	Ass
R	Elephant
Rr	Acoustic Root of Creation
Lr	Sound of the Kulkundani
Lrr	Fruition, Practication
E	Development of mundane knowledge
Ae	Welfare in the Subtler Sphere
O	Pious resolve and Universal Welfare
Ao	Surrender to the Supreme
Am	Repulsion, Poisonous mentality

F. Ajna Chakra

Ajna Chakra has 2 propensities and represents the Prakriti which is over all negatively charged. This is situated between the two end points of the eye brow on little back of forehead area (Fig. 8). This is closely related to another two important glands, Pituitary and Pineal glands. A person can be very intelligent if his/her Ajna chakra is active. Ajna chakra represents the Chitta (unit mind), which is related to above mentioned two important glands. From the Muladhar chakra the Ida (also known as Ganga), Pingla (also known as Jamuna) and Shushumna (also known as Saraswati) flow upwards separately and meet at Ajna Chakra. The nature of the sentient force is to produce the consciousness in the form of Saraswati in “Bramh”. Similarly, the mutative force produces the consciousness in the form of Lakshmi in “Vishnu” and the static force produces the consciousness in the form of Durga in “Shiva”. Bramh, Vishnu and Shiva are, respectively, Generator (G), Operator (O) and Destroyer (D) of life. Thus, the meaning of GOD is a generator, operator and destroyer which are nothing but a Sagun Bramh/Nikola Tesla’s 369 triangle.

Fig. 8. Ajnachakra or pituitary gland or medullar plexus or Chandra mandal.

From the Muladhar Chakra, the Ida, Pingla and Sushumna flow upwards separately and meet at Ajna Chakra. Therefore, this is called “Triveni” which means the meeting point of three rivers’ or energies. This triangle type of meeting point is also called “Tirtha Raj”. Therefore, if one likes to fulfill their wishes, one has to meditate daily at this point and chant the Omkara mantra or Guru given mantra. These words are related with the human’s propensities control the other endocrine organs through the different hormones like growth hormones. People get tall or dwarf depending upon the secretion of these hormones. This plexus is very important because it affects the thought of a person also.

<i>Acoustic root</i>	<i>Propensities</i>
Ksa	Mundane knowledge
Ha	Spiritual knowledge

G. Sahasrar Chakra/Pineal Gland

Sahasrar Chakra/Pineal Gland is the combination of all above chakras and has all together 1000 propensities. (Fig. 9) This Chakra (also called Eternal happiness Chakra) as a center of the Eternal power is situated at the palate in the roof of the mouth and little above the Pituitary gland. This is the actual place of Chitta (unit mind) where the wave light of knowledge is reflected. The Susumna-sirsha, small mind, Panch-tanmatra, mind, wisdom, ten Indriyas and Vijanmaya Kosha is controlled by this Chakra. This gland is activated by light, and it controls the various biorhythms of the body. It is important in initiating super natural powers. To enter into higher dimensions, the pineal gland and the pituitary body should vibrate in parallel which can be achieved through meditation. Pineal gland of a person works with 50 dimensions together with 5 internal and 5 external making 10 and the pituitary gland also controls another 2 glands. Sahasrar Chakra is overall positively charged entity. It can also be called a part of NirgunBramh (qualityless Bramh) having all the qualities remain in inactive form represented by zero.

Fig. 9.Sahasrarchakra or pineal gland or cerebral gland or Mahasukhachakra.

III. MATHEMATICAL INTEPRETATION OF PLEXUS SYSTEM WITH NIKOLA TESLA'S 369 THEORY

Let us analyze above facts with Nikola Tesla 369 Theory which resembles with "The Theory of Absolutivity". It has been shown in Table I.

TABLE I: COMPARISON OF PLEXUS SYSTEM WITH THE NIKOLA TESLA'S 369 TRAINGLE AND THE THEORY OF ABSOLUTIVITY

Plexus	Words (dimension)	Acoustic root	Digital root	Vedic name	Interpretation in forming Universe and living entities
Sahasrar	1000 (50*2*10)	-	1+0+0+0 = 1	Satyam	Part of Purush/Omega Point (+)
Ajna	2	(Ohm) 1	2 + 1 = 3	Tapah	Prakriti / Sagun Bramh (-)
Visuddha	16	(Han) 1	17 = 1+7 = 8	Janah	Ethereal
Anahat	12	(Yan) 1	13 = 1+3 = 4	Mahah	Areal
Manipur	10	(Ran) 1	11=1+1=2	Swah	Fire
Swadhi-sathan	6	(Van) 1	6+1= 7	Bhuvah	Liquid
Muladhar	4	(Lan) 1	4+1 = 5	Bhuh	Solid

There are all together 1 to 9 digital root numbers exists according to Theory of Nikola Tesla 369 triangle. All other higher or lower numbers are the combination of those digital root numbers(Engineer's Academy, 2020a). Nikola Tesla's numerical digital root numbers onwards are shown in the text in italics within brackets. Zero alone does not have any significance but if it is used in combination with other numbers it carries meaningful idea. If we look in Table 1 of digital root numbers, (6) and (9) are missing. Those numbers represents some kind of interesting paradox which is strange and amusing. Digital root numbers 3, 6, 9 have some special significance. Doubling or halving the (3) and (6) numbers always finally gives the (3) and (6) digital root numbers in sequences. There is no (9) number seen anywhere in these sequences. Similarly doubling or halving the (9) number always gives digital number (9). Halving the circle, polygon, pentagon and other geometrical figures always give finally (9) as a resulting digital numbers of those angles. Digital root number (9) is present everywhere in the universe and it keeps everything in equilibrium (Engineer's Academy, 2020b). It is also present in a singularity and infinity condition. If 3, 6, 9 numbers are arranged together it makes a letter Ohm (AUM) which represents actually a Sagun Bramh (Fig. 11). These are the higher dimensions. Number zero represents the Nirgun

Bramh (having all the qualities in dormant form) which does not possess any quality in action.

Mathematically, the whole Universe and God could be represented by 0 to 9 mathematical numbers. Zero represents the Nirgun Bramh (qualitiless entity/Absolute entity) where as 1 represents the Omega point which is a portion of Nirgun Bramh/Absolute entity. Similarly magical numbers 3, 6, 9 represents the Sagun Bramh/Real universe which is part of upper portion of Black hole before Big-bang, a kind of higher dimensions. Number 2, 4, 5, 7, 8 are the Virtual Universe representing Ethereal, Areal, Fire, Liquid and solid which is the projection of Real Universe (3, 6, 9). The Nikola Tesla's 3, 6, 9 Theory, thus, completely agrees with the Theory of Absolutivity.

These facts also fully support the above hypothesis of universe formations mathematically. Prakriti and Purush both obey spiritual laws but do not follow the physical laws completely. Visible World follows the physical and mathematical laws completely with great precessions. There are some additional invisible dimensions (3, 6, 9) of anti-matter whose existence cannot be seen. The reason is that their dimension remains in very small curved space of invisible quantity something like a million, million, million, million, and millionth of an inch (Hawking, 2007). The entire Cosmos is filled with these elements. Human's Unit Mind can enter into the curved quantum strings and can go swiftly anywhere at any place through the dimension of Parallel Universe.

Fig. 10. Omega point in a real universe.

Fig. 11. Nikola Tesla's theory of 369.

The beginning of the physical universe is taken place from the Sagun Bramh (Fig 10) through the Big-bang. There is an invisible Parallel World on upper side of the Big-bang where all the dark matter and celestial bodies attracted towards a point with illumination in singularity condition at the meeting point of Eda, Pingla and SushumnaNadi at Omkara point (3, 6, 9) as shown in Fig 1. Information acquired at Visible World could be recovered after death of physical body somewhere from Parallel World (3, 6, 9).

Fig. 12. Creation of universe from black hole or Sagun Bramh.

Thus, the process of black-hole formation and the big-bang remains continued forever. Meditation is the process practiced by Unit Mind (mind of a person) to reach near to Cosmic Mind. According to Osho Rajneesh: "As science is not based on opinion and blind belief, and functions only on the principle of investigation, similarly meditation does not function on age old theories or communal thoughts but originates from rational and divine experience (Shrestha, 2018). Elevated yogis observe spiritual or higher dimensions during meditation. These invisible subtler dimensions could be realized through the inner insights with meditation. Without achieving those capabilities, one may not be able to explain the facts of mental and spiritual dimensions in real sense. It is in this sense that Consciousness is transcendental to the manifested universe. The whole universe exists in Consciousness (zero) like future wave in calm sea-only apparently different in potentiality. No substance of Cosmos could be lost or destroyed, but only it changes from potential to the movement forms depending upon their casual condition, and that is when Consciousness-at-rest transforms to Consciousness-in-action, when Potential Energy becomes actual energy.

The biological science tells us that life emerged on this planet from matter about four billion years ago in the form of DNA that has carried the software for the development of billion of species on the way to its final destination in humans. The biological structures have become progressively more and more complex due to the growing complexity of their nervous system, increasing number of their hormones and sophistication of their immune system. The integration and coordination of these systems have made the human body a most complex biological machine among all living beings. The human being is the only animal having the capability of being self-aware. A lot of researches done so far suggest that other animals do not have the capacity to think about them as human being does. The benefits of having a self (such as planning, investigation and self-evaluation) have led to the greatest human problems (Sarkar, 1991). DNA can hold all of the assembly instructions for every protein in all of the 1000 million species of animals that have ever existed in the planet a kind of information system (Shrestha, 2019). Where does genes encoded information come from? It most logically points toward the existence of an intelligent designer or cosmic mind which is nothing but an Absolute Entity/Nirgun Bramh which may remain in any kind of forms (personnel or supreme entity) that cosmic consciousness determines.

IV. HOW THE DESIRE OF A PERSON ACTUALLY MANIFESTED BY AJNA CHAKRA / NIKOLA TESLA'S THEORY OF 369 TRIANGLES?

Ajna Chakra of Sagun Bramh (3, 6, 9) is very powerful entity. It can control all the energy and quantum of objects of cosmos through cosmic consciousness. It works both spiritually and physically if activates properly by a unit mind of a person. It may raise the question how could the desire of a person fulfilled by Sagun Bramh/Nikola Tesla's 369 triangles? There is no physical mechanism or scientific formula yet for proving such activities. It works mainly through the mental and spiritual waves which work through the thought wave of sentient (9), mutative (6) and static (3) forces. This process is nothing but a mechanism of focusing person's wishes towards the Ajna Chakra/Sagun Bramh/Nikola Tesla's 369 triangles. Actually this entity works through extra-dimension of mental spiritual forces of a person to fulfill the desires by acquiring necessary quanta's or energy from cosmos through the mental and spiritual worlds to make it happened. This has been also reflected in the book named "Science of Thought" of Swami Khaptada Baba. It has given some logical scientific reasons. In reality the thought process is the abstract of all the religions. Meditation is also a product of thoughts. The power of thought works as a magic lamp (Shrestha, 2018). This is where mental and spiritual forces play the role. This could be achieved by meditation or sincere pray also. Through meditation people carries unit mind towards the Ajna Chakra/Sagun Bramh entering through the tiny strings of Planks. If this process is repeated with sincere efforts time and again it gives sooner or later desired results. That is why it does not require high qualification of a person but needs simply a sincere pray or focused attention in the objects by any devotee with devotion or prayer or meditation. Why did Tesla think that 369 is important and is a magical number? The reason could be that it is a triangle of sentient (9), mutative (6) and static (3) forces of Sagun Bramh which can manifest any desire as you sincerely thought and make efforts positively.

V. CONCLUSION

The two factors, NirgunBramh/Purush and Sagun Bramh/Prakriti, though dual in theory, are singular in spirit. Their collective body is just like that of fire. One cannot think of NirgunBramh (Zero) without Sagun Bramh (3, 6, 9) in the collective body. The Universe exists in consciousness (Zero/NirgunBramh) like future wave in calm sea-only apparently different in potentiality. In course of time due to casual condition a small portion of Purush known as Omega point falls on Prakriti then consciousness-at-rest transforms to consciousness-in-action, and potential energy becomes actual energy. Thus the Sagun

Bramh/Nikola Tesla's 3, 6, 9 triangle starts functioning for further expansion of the Virtual universe. Thus Nikola Tesla's 3, 6, 9 Theory completely follows the Theory of Absolutivity.

Mathematically whole universe and God can be represented by 0 to 9 digital numbers. Zero (0) represents the NirgunBramh/Absolute entity, digital no.1 represents the Omega point (small fraction of Absolute entity), digital no. 3, 6, 9 represent the Sagun Bramh/Nikola Tesla's triangles of higher dimensions, and digital no. 2, 4, 5, 7, 8, respectively, represents ethereal, areal, fire, liquid and solid, which are the responsible elements for forming celestial bodies in the universe.

The "Theory of Absolutivity" with complementary explanations to ease flow of Big-Bang Model with Black hole has explained facts very clearly with the transcendental and the physical factors as missing links in a modern physical science while explaining universe formation, that, in time, will become a common place broad principle to everyone but not only to a few scientists. This has made clear as why it is that we and the universe exist which is an ultimate triumph of human reason.

Ajna Chakra/Nikola Tesla's 369 triangles is a very powerful entity. It can control all the energy and quantum of objects of cosmos through cosmic consciousness. It works both spiritually and physically if activated properly by a unit mind of a person. It works mainly through the mental and spiritual waves of a person which works through the thought wave of sentient (positive), mutative (neutral) and static (negative) forces. The power of thought works as a magic lamp. Positive thoughts, which could be called willpower, always demonstrate positive results in human behavior. It has capacity to change any kind of lifestyle as one wish to be manifested.

Spiritually evoked Plexus Systems in the human body make help regulate physical and mental attitudes of human's behaviors. The main spring of spiritual practices triggers the neural network system purification harmonizing the human plexuses (chakras) with five great elemental factors, namely solid, liquid, fire, air and ether. A spiritual practice is most effective to make a conscious positive choice for a Global Environment and enhances our ability to deal with such problems.

ACKNOWLEDGMENT

The author thanks and extends acknowledgements to all the great philosophers, scientists, relevant institutions, research centers, magazines, media, and scholars, prophets of all religions especially to the most respectful and the great spiritual personality, P. R. Sarkar and the highly evolved thinker, Nikola Tesla whose views, with gratefulness, have been incorporated in this manuscript. The author thanks to Dr. Samudra Lal Joshi, the NARC Principal Scientist for editing the manuscript and Er. Ameresh Man Shrestha for designing illustrations of the manuscript.
